

AKSHAY BODHANKAR

Software Engineer | Backend & Cloud | Blockchain | DevOps & Automation

+91-8446714720 | akshaybodhankar2197@gmail.com | [linkedin/akshay-bodhankar](https://www.linkedin.com/in/akshay-bodhankar)

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience in backend development, enterprise blockchain, cloud deployment, and automation. Hands-on experience with Hyperledger Fabric, JavaScript Chaincode, Node.js, Express.js, REST APIs, MongoDB, IPFS, Docker, AWS, Ansible, and n8n. Experienced in building blockchain applications, automating infrastructure setup, deploying containerized services, and integrating OCR-based invoice processing with JD Edwards ERP. M.Tech in Software Engineering (Full Stack Engineering) from BITS Pilani.

TECHNICAL SKILLS

Languages: JavaScript, Python, Bash

Backend: Node.js, Express.js, Flask, REST APIs, Microservices

Blockchain: Hyperledger Fabric, Chaincode, Fabric CA, Channels, Peers, Orderers, Hyperledger Explorer, IPFS

Databases: MongoDB, SQL

Cloud & DevOps: AWS EC2, AWS S3, Elastic Load Balancing (ELB), Docker, Linux, Nginx, Ansible, Git, GitHub

Automation: n8n, OCR-based document processing, Enterprise Workflow Automation

Working Exposure: Jenkins, CI/CD, Kubernetes, Terraform, GitHub Actions, CircleCI

PROFESSIONAL EXPERIENCE

INCALUS | Blockchain Consultant

Thane, Maharashtra | Aug 2023 – Present

- Designed and configured a Hyperledger Fabric blockchain network for a Supply Chain, including organizations, peers, orderers, channels, and Fabric CA.
- Developed generic JavaScript Chaincode for blockchain transaction processing and validation.
- Built Node.js and Express.js backend services and REST APIs for communication between enterprise applications and blockchain services.
- Implemented application data management using MongoDB and containerized blockchain/backend components with Docker.
- Deployed the Supply Chain POC on AWS EC2 and used AWS S3 for object/file storage.
- Built an n8n-based invoice automation workflow that used OCR to extract invoice information and automate creation of corresponding transactions in JD Edwards ERP.
- Implemented workflow/data-processing logic to transform extracted invoice information for enterprise ERP integration.

C-DAC | Project Engineer

Hyderabad, Telangana | Feb 2020 – Jul 2023

- Developed JavaScript Chaincode for Hyperledger Fabric applications, implementing CRUD operations, identity management, and access-control functionality.
- Built backend services using Node.js, Express.js, REST APIs, and MongoDB for blockchain-based applications.
- Implemented end-to-end IPFS integration for document storage, including upload/download, encryption, CID handling, and retrieval.
- Integrated IPFS with blockchain applications to associate stored documents and identifiers with blockchain transactions.
- Supported blockchain environments involving approximately 3 organizations and 2 peers per organization across multiple networks and applications.
- Supported development environments and production deployment on-premise infrastructure.
- Automated previously manual infrastructure preparation using Ansible, including EC2 provisioning and installation of required dependencies.
- Worked on SecuredLM, a firmware-processing system that recorded firmware-related transactions and associated data on the blockchain.

SELECTED PROJECTS

ERP & Supply Chain Blockchain Platform

Hyperledger Fabric | JavaScript | Node.js | Express.js | MongoDB | AWS | Docker

- Built a blockchain-enabled Supply Chain POC with an end-to-end Fabric network and generic JavaScript Chaincode.
- Developed Node.js/Express.js middleware and REST APIs for enterprise-to-blockchain integration.
- Deployed containerized components on AWS EC2 and used S3 for object/file storage.

Invoice OCR & JD Edwards ERP Automation

n8n | OCR | JavaScript | JD Edwards ERP

- Developed an n8n workflow to extract invoice information using OCR and process the extracted data.
- Automated creation of corresponding transactions in JD Edwards ERP through enterprise-system integration.
- Implemented workflow and data-transformation logic for automated invoice processing.

AWS Application Deployment

AWS EC2 | S3 | ELB | Docker | Nginx | GitHub Webhooks | MongoDB

- Implemented a containerized AWS deployment architecture using EC2, Docker, Nginx, and Elastic Load Balancing.
- Integrated GitHub Webhooks into the development/deployment workflow and used S3 for object/file storage.
- Worked with MongoDB and Linux-based application environments.

EDUCATION

BITS Pilani — Work Integrated Learning Program

M.Tech in Software Engineering — Specialization: Full Stack Engineering | 2024 – 2026 | CGPA: 6.7/10.0

C-DAC, Hyderabad

Diploma in System Software Development | Jan 2020 | 63%

SGBA University, Akola, Maharashtra

B.E. in Computer Science and Engineering | June 2019 | CGPA: 7.06/10.0

CERTIFICATIONS

- Hyperledger Fabric Certified Practitioner (HFCP) — The Linux Foundation, 2025
- Tutedude DevOps Course — Tutedude, July 2026
- Microsoft Certification in Programming using Python — 2019
- HackerRank Python Basic Certification — 2021
- Microsoft HTML5 Application Development Fundamentals — 2019
